

## ALARM BILLING SYSTEM

*Larimore's Alarm Billing System allows you to efficiently and automatically track alarms and issue invoices – and ultimately increase your revenues.*

Because we can design an Alarm Billing System that conforms to your ordinance, the end result is a system that fully integrates with the way you work and ensures that you never miss out on potential revenues.

### **Integrates with CAD to make alarm tracking easy**

- ◆ Alarm calls entered into CAD are automatically tracked in the alarm owner's record in Larimore's premise system
- ◆ No additional entry required by dispatchers

### **Highly configurable system conforms to your ordinance**

- ◆ You decide the levels at which a property owner is warned and/or billed, and can change the levels as needed, such as when the ordinance changes
- ◆ Changing fee structures based on the department's ordinances are easy to implement
- ◆ System supports escalating fee structure that can also be easily updated without affecting previously issued bills
- ◆ Easily track when renewal notices are sent, received, and paid

### **Process alarms and mailings with minimal effort**

- ◆ Alarm transfer process allows users to determine whether an alarm call should be considered billable or non-billable; original CAD records available at the press of a button
- ◆ Based on alarm levels, system automatically generates warnings, summonses or bills
- ◆ Letters are addressed and ready for use in standard window envelopes
- ◆ Robust reports allow you to easily track delinquent accounts

**Premise System**
