

FIRE MOBILE

Larimore's Fire Mobile gives firefighters instant access to critical call information in an easy-to-use format.

Information entered in the field is instantly shared with your dispatch center, and vice versa, ensuring that everyone has the most current data. Add this module to your Larimore CAD in order to keep your fire personnel informed.

Up-to-the-Second CAD Information

- ◆ Information is provided to the Fire Apparatus before, during and after an event
- ◆ The dispatcher assigns the apparatus to the call as an event is initiated in CAD
- ◆ Firefighters in the field can view CAD information - including call type, location and times, as well as other Pre-Fire Plan information such as business/residence name, suppression systems and utilities shutoff locations.

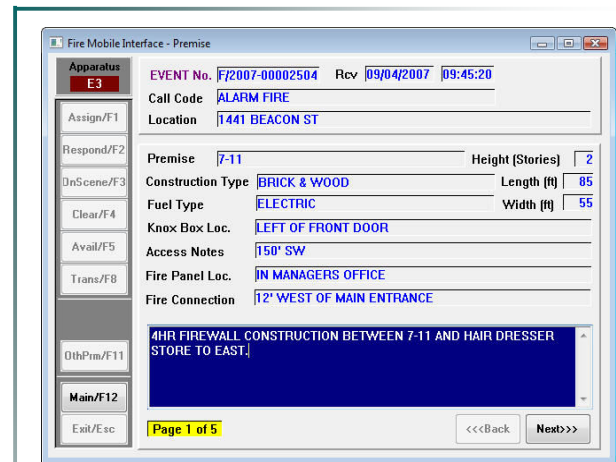

MDC utilizes touch screen technology

- ◆ Retrieve information with the touch of a finger
- ◆ Screen is designed for ease of use and quick access when responding to an emergency

Access valuable Premise system information

- ◆ Pre-Fire Plan information
- ◆ Information gathered during inspections:
 - Occupancy type
 - Business name/Owner name
 - Phone numbers
 - Gas, electrical and water shutoff valve locations
 - Special fire hazards
 - Hazardous material storage
 - Fire flow
 - Distance to nearest exposures
 - Fire Control Panel
 - Fire Department Connections
 - Rapid Access box location
 - Special notes section
 - Other pertinent information

The integration of Larimore Fire Mobile, Mapping, and Premise systems provides a powerful tool for your emergency response team.

Optional Mapping add-on provides quick reference

- ◆ Location of call
- ◆ Nearest hydrants
- ◆ Distance Radius from Call
- ◆ Other user defined layers (storm drains)
