

## CAD / ProQA™

The ProQA™ Interface gives dispatchers the ability to launch ProQA™ software, developed by Priority Dispatch, from within the Larimore CAD System.

### Seamless integration

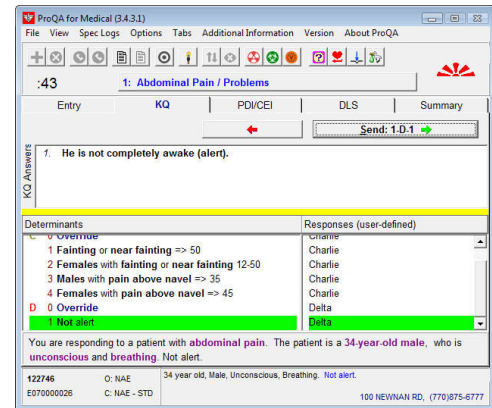

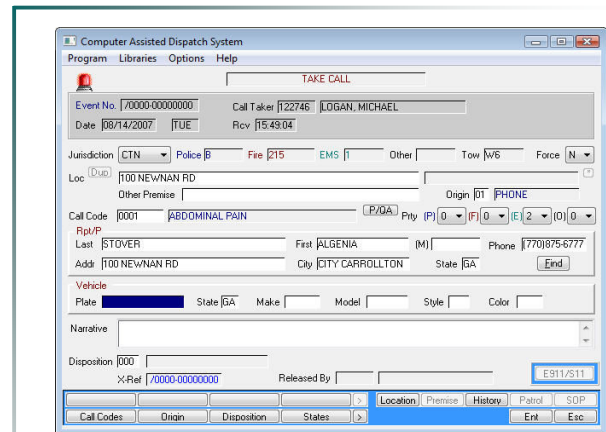

- ◆ One login to Larimore's CAD system launches both CAD and the ProQA product
- ◆ Ability to specify the types of medical calls that will launch the ProQA through Larimore's innovative Call Code library
- ◆ Call taker has control over the launch of the ProQA during an applicable call
- ◆ All appropriate CAD data is transferred to ProQA to start the questions

### Track all data through CAD

- ◆ If the caller's situation changes to a different configuration during the call (i.e. from breathing to not breathing), the CAD system is updated using a CAD Alert — the CAD Alert updates the dispatcher who in turn passes on the new information to the responding units
- ◆ All CAD Alerts are attached to the CAD event as a transaction for later viewing and searching
- ◆ A full history of the information entered in both the CAD system and the ProQA system is linked together in CAD

### Innovative technology

- ◆ Larimore is one of a select group of vendors in the United States that is certified by Priority Dispatch to interface to their ProQA medical Software

Access all the benefits of true medical dispatching through the integration of ProQA™ software (developed by Priority Dispatch) from within your Larimore CAD System.
