

CAD MDC [MOBILE DATA COMPUTER]

Larimore's CAD MDC interface gives officers instant access to critical call information in an easy-to-use format.

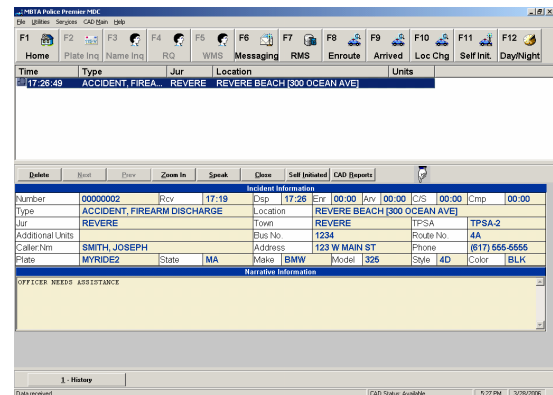

Add this module to your Larimore CAD to keep your officers informed and reduce radio traffic through the use of functions such as silent dispatch and self-initiated calls. Information entered in the field is instantly shared with your dispatch center, and vice versa, ensuring that everyone has up-to-the-second data.

Works with a variety of mobile hardware vendors

- ◆ Larimore's customizable CAD system can be built to interface with a wide variety of mobile-hardware vendors
- ◆ In some cases, Larimore CAD functionality can be embedded within mobile vendor's software, giving officers access to messaging, NCIC lookups, and CAD functionality, all in the same program

Powerful software gives officers a variety of functions

- ◆ Functions available to officers include:
 - *Silent Dispatch* – units notify dispatch of acceptance of calls with the push of a button
 - *Recall Active Call* – officers can view information about the call, such as call type and location, as recorded at dispatch
 - *View History & Patrol Files* – gives officers the ability to see the call history of a given location as well as critical information about residents or the surrounding area
 - *Status Updates* – unit can notify dispatch that it has arrived or is going to alternate location
 - *Unit Transaction* – officers can request tows, ambulances, etc., and record other transactions such as a transport
 - *Messaging* – from dispatcher to unit and vice versa

Initial Screen

**Keep your officers in the field informed – add an MDC interface to your Larimore CAD System.
