

ENHANCED NFIRS 5.0

Larimore's Enhanced NFIRS 5.0 simplifies fire reporting and takes the hassle out of submitting while providing accurate data to assist operational decisions and self-assessment.

This robust system far exceeds the FEMA/USFA – NFIRS 5.0 requirements, allowing you to be confident that the reports you submit will meet all necessary standards the first time. Our NFIRS 5.0 system is modified as needed to also capture each state's individual requirements.

Fully integrated or stand-alone

- When combined with Larimore's CAD and Scheduling systems, NFIRS 5.0 system eliminates dual entry by pulling all relevant data from the corresponding CAD call such as times, apparatus, personnel, and location.
- System can also be used on a stand-alone basis with no drop-off in functionality
- Can be modified to pull data from other vendors' CAD systems

Improved accuracy, reduced or eliminated errors

- Powerful audit function allows you to identify errors before they are submitted and provides information that enables you to quickly make corrections
- Error-checking tools validate data as it is entered, ensuring increased accuracy of data at time of entry
- Creates files that can be e-mailed to the state, reducing the possibility of misinterpreted data

Detailed records with powerful options

- Can optionally integrate with Larimore's Imaging System to allow for photos or scanned documents to be attached to an exposure
- Unlimited number of exposures
- Includes simple entry of all required records, including Fire, Wildland, Hazards, Resources/Personnel, Vehicles, Narrative, and more
- Narrative features fully functional spell-check and word-processor-quality editing tools

With its ease of entry and powerful auditing tools, Larimore's Enhanced NFIRS 5.0 System is the right solution for your department.
