

NIBRS

Larimore's National Incident Based Reporting System (NIBRS) program greatly simplifies the process of completing the monthly NIBRS Report.

Combined with an easy submission creation process, the NIBRS System is a time saving program that improves accuracy through its built in tables and error notification.

Fully integrated

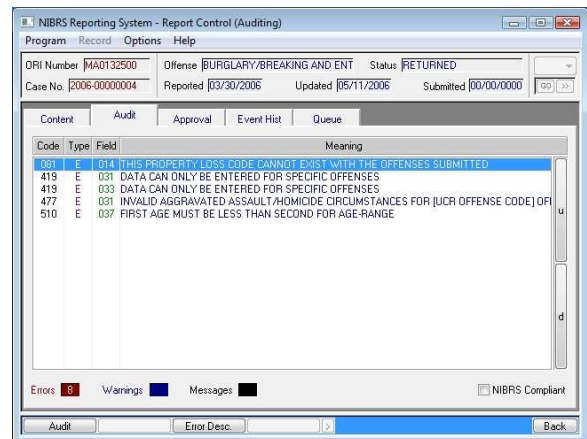

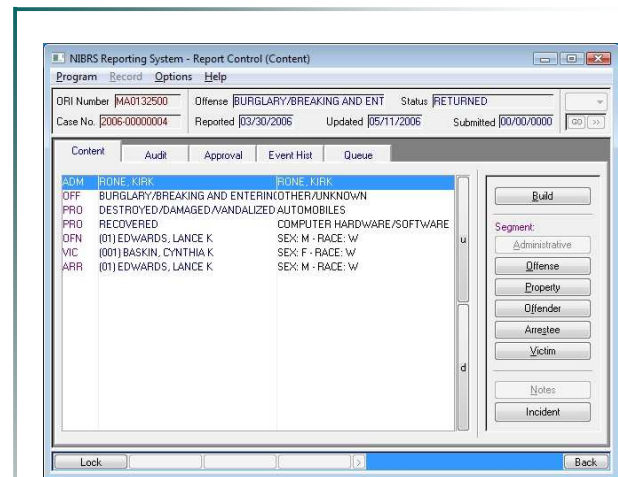

- ◆ When combined with Larimore's Incident and Arrest Systems, the NIBRS system eliminates dual entry by pulling all relevant data from the two systems and then allowing for the specific NIBRS data to be updated
- ◆ The system imports all NIBRS relevant data that has been captured in the Incident and Arrest systems for victims, offenders, arrestees, property and offenses, as well as basic incident information
- ◆ Original records in Incident and Arrest systems are not affected by any updates made when updating information to produce NIBRS compliant data

Improved accuracy, reduced or eliminated errors

- ◆ Powerful audit function allows you to identify errors and correct them - Audit utility gives detailed explanation for errors, with information on what needs to be entered
- ◆ Error-checking tools validate data as it is entered, ensuring increased accuracy of data at time of audit
- ◆ Creates files that can be e-mailed to the state in the state required format
- ◆ System can default common data elements such as exceptional clearance status to reduce the data entry time

Detailed records with powerful options

- ◆ Reports can be built and audited one at a time, or in a group process
- ◆ Quickly see all reports that are the same status, such as compliant, non-compliant, aging, returned, etc.
- ◆ The Incident and Arrest records may be viewed within the system allowing for quick review of the originating information
- ◆ Detailed security enhances the department's ability to separate work and determine each person's responsibilities

With its ease of entry and powerful auditing tools, Larimore's NIBRS System is the right solution for your department.
