

PROPERTY EVIDENCE TRACKING

Ensure that the chain of custody is never broken - track each step with Larimore's Property Evidence Tracking System.

Larimore's customizable system simplifies the task of recording all the important details about each piece of evidence and ensuring that everything is properly tracked.

Simple entry, thorough tracking

- ◆ Robust system records extensive details about each piece of property
- ◆ System allows for multiple quantities of identical items, so each one does not need to be entered separately
- ◆ Transactions system allows property officers to thoroughly track chain of custody
- ◆ Separate record types for general property and vehicles to accommodate departments with impound lots and/or vehicle auctions
- ◆ Unique contamination field flags officers to evidence that requires special handling

Fully integrated with Incident System

- ◆ Users can import information from the Larimore Incident System into the Property Tracking System, reducing or eliminating dual entry
- ◆ Each item in Property Tracking System is tracked with a case number that matches with the corresponding record in Incident System

Robust searching & reporting features

- ◆ Administrators can run a single report to determine which pieces of evidence can be destroyed
- ◆ System can be searched by case number, property type, date of entry, and much more

Optional Barcoding Module

- ◆ Larimore offers a fully integrated barcoding module that allows property officers to use handheld scanners to quickly print inventory labels, process property in and out of the property room with full movement tracking, and audit processing.

OPTIONAL BARCODING MODULE

- ◆ Larimore offers a fully integrated barcoding module that allows property officers to use handheld scanners to quickly print inventory labels, process property in and out of the property room with full movement tracking, and audit processing.
