INTEGRATED SOLUTIONS FOR CAD RMS MOBILE

RESTRAINING ORDER

Easily track and search your restraining order / order of protection records with this robust solution from Larimore Associates.

When you need to quickly access restraining order information, this easy to use system will be an asset to your department.

Complete record-keeping capabilities

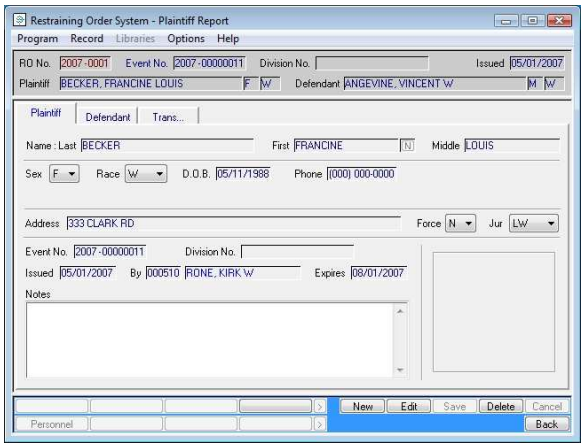
- Full information about defendants and plaintiffs can be recorded
- Names are validated against the Master Name File – allowing you to determine if the person involved has been previously encountered by the department
- Defendant's record allows for entry of descriptive features, such as physical characteristics, the relation to the plaintiff, vehicle information, and more
- When integrated with the photo imaging option, a photo can be displayed for both the plaintiff and defendant

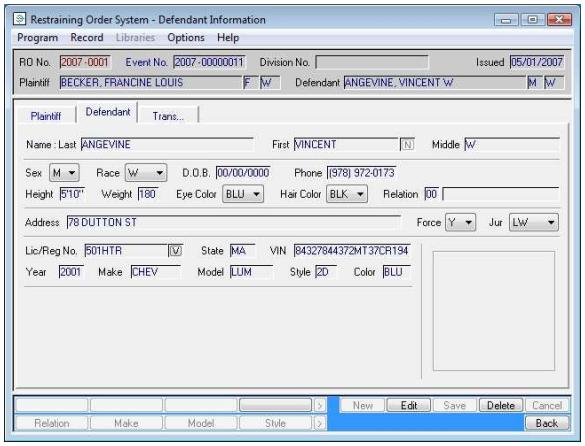
Integrates with CAD

- As restraining order records are created, a corresponding patrol file is created in the Patrol File/Hazard System
- When a matching name, address, or vehicle is entered in CAD, dispatchers are alerted to the existence of the restraining order

Full transactional records

- Track all activity related to any restraining order – violations, changes to the conditions of the order, notification attempts, etc.
- Department Defined transaction types allow for much control over processes.





Ensure that your officers have a powerful system to manage restraining orders.
