

## SCHEDULING SYSTEM

*Larimore Associates' Scheduling System sets the standard for flexibility and eases scheduling headaches.*

Every department handles scheduling in its own unique way. That's why Larimore's Scheduling System was designed with all the tools necessary to build just about every imaginable type of schedule. Combine that with its integration into other Larimore systems such as CAD, NFIRS 5.0 and Personnel, and you have a program that makes schedule management a snap.

### Build schedules with a minimum of effort

- ◆ Template-driven system allows you to build a wide variety of schedules
- ◆ Highly automated – build an entire year's worth of schedules at once
- ◆ Accommodates both rotation- and cycle-based schedules, or build an entirely unique template from scratch
- ◆ Create schedules for an individual or an entire group
- ◆ Robust filters allow you to build schedules by rank, division, or shift

### Daily changes can be made with ease

- ◆ Changes to an individual's schedule may be made daily or for several days at a time for vacation or leaves of absence.
- ◆ Each day record can accommodate up to 12 different work statuses between the primary day record and split day record.
- ◆ The Schedule Listing program provides tool for entry of roll call information.

### Management reports give administrators all the tools they need

- ◆ Variety of standard reports allow administrators to void manpower shortages and track schedule balances easily
- ◆ Accurately track overtime to ensure it is equitably distributed
- ◆ Standard reports include:
  - Daily Work Schedule
  - Yearly Work Schedule
  - Status Summary Report
  - Overtime Payroll Report
  - Monthly Work Schedule
  - Statistical Analysis Report
  - Exception Report

### Full integration with other Larimore systems

- ◆ Integration with Personnel allows scheduling balances (vacation, comp time, etc.) to be automatically updated the moment a scheduling change is made; system prevents users from taking time they don't have
- ◆ Integration with CAD allows dispatchers to log on a pre-plan roster, as populated from the Scheduling records, eliminating dual entry
- ◆ Robust Balance Adjustment Utilities allow for time owed/time on the books to be tracked and updated as needed as time is accrued and earned.
