

STATE INTERFACE

Larimore's State Interface offers computerized access to State/NCIC queries through our robust Message Switch for both CAD and Mobile units.

Access to Name, Plate Information

- ◆ Name and Vehicle queries are accepted as well as Operator License Number (OLN), Vehicle Identification Number (VIN), Article, Gun, Boat and Snowmobile
- ◆ Query responses are sent to both CAD and Mobile units

Response Viewer

- ◆ CAD Response viewer displays a complete listing of all query responses
- ◆ Each response can be viewed on the listing screen or in greater detail
- ◆ When an individual response is selected, complete details of the response display in full on the text screen of the Response viewer
- ◆ Associated responses can be viewed as well

Create Queries from CAD or selected modules

- ◆ Queries can be created and sent from the Response Viewer or from selected CAD modules
- ◆ Some commonly associated CAD modules are the Traffic Stop, Self Initiate, Unit Transaction and Event Transaction functions

Transaction Records

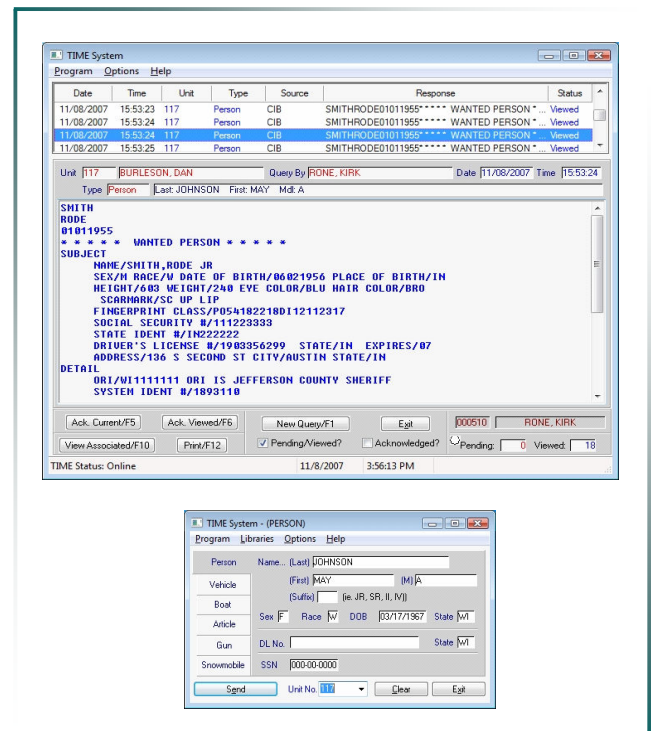

- ◆ A record of each query and associated responses is kept by the CAD system
- ◆ Depending upon the type of query used, the CAD system or associated module will create a Unit Transaction record or an Event Transaction record that is tied to the call

Pending Query Indicator

- ◆ Pending queries are indicated by a visual display on the CAD screen

Query Reports

- ◆ A printed report is available for all query responses
- ◆ Each report can be viewed on screen or sent to a printer to obtain a hard copy of the query response

A complete record is kept on all query responses and can be referred to as needed.
