

SUPPORT FILES - PREMISE

Use Larimore's Master Premise System to capture and maintain premise data for each location inspected.

The Master Premise System encompasses four main areas of information: the **Master Premise** record, **Fire Inspection** records, **Permit** records, and **Hazard** records.

Track all details

- ◆ All information is accessible through the CAD system based on location information entered, and through search facilities
- ◆ For each premise inspected, a record is entered and maintained, including: premise name and address, owner's name and address, sprinkler connection locations, standpipe locations, etc.
- ◆ As an option, this system can be integrated with an imaging function for storage and retrieval of floor plans and other pertinent documents

Information attaches to the Master Premise Record

- ◆ **Inspection Record**
 - Each premise has inspection records which include:
 - Premise name and address
 - Date inspected
 - Re-inspection date
 - Inspection violations
 - Any other necessary information
 - Contains a special edit feature for a Fire Prevention Bureau or supervisor so they may review any new inspections for approval, or view open inspections
- ◆ **Permit Record**
 - Each premise that has been issued permits will have the permit type information, expiration date, etc. entered and attached to the premise record
- ◆ **Hazard Record**
 - Log information on any hazardous material stored at each premise
 - May include location of such material, any special notes about the material and the appropriate material classification

Standard Management Reports

- ◆ Premise Record
- ◆ Permit History Report
- ◆ Inspection Summary Report
- ◆ Hazard Report
- ◆ Inspection Notices
- ◆ Inspection Report

With Larimore's Master Premise System, you can easily keep track of all pertinent premise information. Call today for more information on how this system can benefit your department.
