

TOWED VEHICLE SYSTEM

Keep track of everything related to towed vehicles with this module from Larimore Associates.

Larimore's software provides an online registry of towed vehicles and allows you to cross-reference impounded and/or towed vehicle records with vehicle records stored in other Larimore modules, such as Incident and Arrest records.

Record everything related to a tow

- ◆ System records all details surrounding the tow, such as license plate information, vehicle identification, the location from which the vehicle was towed, the tow lot to which the vehicle was towed, and whether the tow was at the request of the police or a citizen
- ◆ Each vehicle entered is verified against the Master Vehicle file – users can see if the vehicle has been logged in another system, such as an Incident, Arrest, Citation, or Parking Ticket
- ◆ User can also view list of all contacts associated with the vehicle, and whether any of them were previously recorded in Larimore – if so, those records, such as Incident or Arrest records, can also be viewed
- ◆ Tow fees can also be tracked and updated

Powerful search & reporting functions

- ◆ Searching is simple and can be done by vehicle, by contact name, by date, by location, and many more parameters
- ◆ Standard reports that are included with the system include a released-vehicle cost schedule, a tow activity log, and a tow abstract report that prints all details associated with a single tow
